VIGIA TIRE PRESSURE SYSTEMS

PUMP YOUR PROFITS AUTOMATICALLY.

VIGIA keeps tire pressure automatically... even with a puncture.

Tire pressure is maintained at a constant, pre-set level while delivering instant, ongoing feedback to the driver.

If a tire requires inflation, the driver is alerted via gauges and lights, while the tire is automatically re-inflated.

Now you can concentrate on building your profits while reducing your running costs...

Better tire mileage:

Improper inflation accounts for 80% of retread separations, cut, bruises, flats and blowouts. Underinflation of only 5 PSI reduces tire life by a shocking 25%.

Less down time:

VIGIA virtually eliminates the need for costly road service calls and expensive down time. If a tire has been punctured, Vigia will continue to inflate that tire and, at the same time, let the driver know what is happening. He's then aware of the situation and can continue on to his destination or plan to stop for service.

Better fuel economy:

For every PSI of underinflation, your vehicle consumes 0.8% more fuel. Talk about giving your budget a boost!

Increased safety:

Under inflated tires is a major cause of truck accidents on Canadian highways.

Proper inflation is the most important requirement for maximum tire safety. Correct tire pressure provides proper sidewall flexing and safe operating temperature of the tires. Underinflation becomes an especially serious problem when the inside tire of a set of duals begins losing pressure. In some cases, both tires fail with very dangerous consequences.

VIGIA is a ISO 9002 certified product.

Effect of inflation on tire life

— **True peace of mind for today's competitive carrier:**

Worry-free performance in any weather:

Vigia is Canada's central tire inflation specialist. Rugged, innovative and steel-tough, this is a system designed to eliminate the tire worries, hassles and costs that truckers face with Canadian roads and seasons.

Flexible:

VIGIA offers different solutions to the trucking industry, including dedicated systems for tractor-trailer combinations, trailer only systems and external or internal system connections. There is always a Vigia system that meets your specific needs and budget.

Proven around the world:

Vigia's high quality components are built to last. Vigia is the tire pressure system of choice for durability, safety and reliability. With more than 15 years in Canada and with sales in 20 countries around the world, Vigia stands ready to handle the most strenuous demands in the toughest environments, again and again.

VIGIA is a ISO 9002 certified product.
